Oxygen sensor assembly

Detcon Model DM-534 sensor is designed to detect and monitor O2 in air over the range 0-25% by volume. The sensor assembly consists of an electrochemical

fuel cell mounted in a stainless steel housing that includes a splashguard with

integral cal port, a signal conditioning control transmitter circuit, a base connec-

tor board and an explosion proof junction box. Operator interface is via a small

handheld magnet. One of the main features is the embedded intuitive software

that guides the user through routine calibration and configuration menus using a
