

Dräger X-plore® 7500 Powered Air Purifying Respirator

The Dräger X-plore® 7500 provides reliable protection, comfort, and safety for a wide range of industrial applications where hazardous gases, vapors, and particles are present: from welding and grinding, to use in the chemical or agricultural industries.

The wide range of available Rd40 filters ensures that you get the right protection for your application. In addition, the Rd40 filters can also be used with your standard Rd40 threaded Dräger X-plore® masks, allowing full flexibility in your respiratory program.

You can also choose from a wide range of Dräger X-plore® Hoods, helmets and visors, the Dräger X-plore® 4740 half masks as well as the Dräger X-plore® 6000 full face masks to fit your application. Compatibility is guaranteed since the Dräger X-plore® Helmets, hoods and visors can be used with the Dräger X-plore® 7300 and 9000 series as well.

Excellent safety is provided by the audible and visual warnings of the Dräger X-plore® 7500. Regardless of whether the filter life is exhausted, the battery capacity

is low, the breathing resistance increases, or the airflow decreases – any potentially hazardous situation is clearly indicated by the flashing display and an acoustic alarm signal.

In addition, the multifunctional operating display allows you to monitor the battery status and filter capacity at the touch of a button. You can also adjust the airflow to fit your individual needs.

The Dräger X-plore® 7500 works when you do. The rechargeable NiMH battery operates for a period of up to 10 hours. The battery is mounted directly onto the blower so there are no cables to get you caught up, allowing for freedom of movement and increased safety.
